MINI-BLOG

The Mini Blog is a modern web application built with Django that provides a platform for users to share their thoughts, ideas, and experiences through blog posts. The application features a clean, responsive design and includes essential blogging functionalities while maintaining a user-friendly interface.

Customization Details:

Blogger Profiles

- Dedicated profile pages for each user
- Display of user's posts and bio
- Profile picture upload capability

> Save for Later Feature

- Users can save posts for future reading
- AJAX-based implementation for smooth user experience
- Saved posts list with easy removal

Challenges & Learnings:

1. Implementing Save for Later option

- Maintaining the save button state across page refreshes
- Implementing AJAX for smooth user experience

2. Comment option only for authenticated users

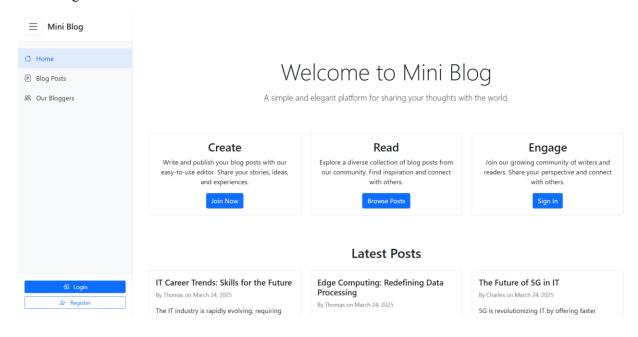

- Preventing unauthorized access to posts and comments
- Implementing CSRF protection for AJAX requests
- Handling user authentication securely

Solutions Implemented:

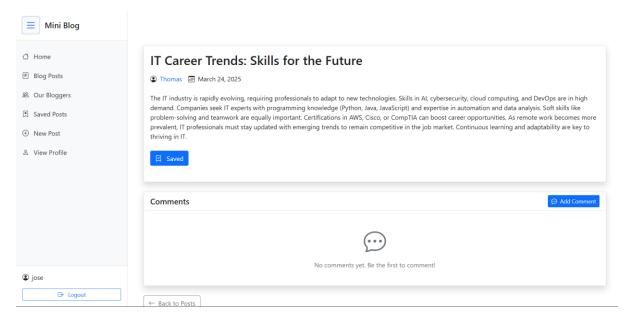

- Adding error handling for failed requests
- Using Django's built-in authentication
- Adding CSRF tokens to forms and AJAX requests
